SOURCE: Microbiologia, parazitologia, epidemiologia, v. 10, no. 1, 1965, 11-17

TOPIC TAGS: experiment animal, vaccine, bacterial disease, bacteriophage, respiratory system disease

ABSTRACT:

The authors review the pertinent literature and report their own findings in a group of 44 monkeys used in polio vaccine production, of which 33 were sick and 11 normal. In the normal monkeys the authors found enterococci and streptococcus viridans as well as many enterococcal bacteriophages; in the blood of 6 of the sick monkeys they found streptococci of the A group, C group and Str. faecalis var. zymogenes, while the other sick monkeys displayed various types of pneumococcal infections from which 23 strains of pneumococci were isolated. The septicaemic type prevailed (63 percent). [JPRS]

TITLE: The determination of the energy distribution of the neutron flux by the activation and transmission methods

PERIODICAL: Referativnyi zhurnal, Fizika, no. 1, 1963, 39, abstract IV279  
("Rev. phys. Acad. RPR", no. 1, 1962, 7, 39 - 44)

TEXT: An investigation is conducted of a method of solving an integral equation relating the function of the neutron-flux distribution  $\Phi(E)$  to an activation of the sample A. It is assumed that the magnitude A is known from experiment. The energy region of the neutrons is broken up into a number of small intervals. The generalized theorem of the mean is applied to the obtained partial integrals. Then, the problem is reduced to the solution of the linear equations system. A similar method of determining the flux distribution is used in the experiments by the transmission method. To solve the system of equations, the activation experiments were combined with the experiments by the transmission method. The error magnitude when breaking up the energy region into n intervals was estimated.

"Valoarea hepato-clinică comparativă a unor teste enzimatică, în cursul  
hepatitei epidemice. The clinical significance of some en-  
zymatic tests of the hepatic condition in the course  
of epidemic hepatitis PROBL. TERAPEUT. 1956, 3 (31-42) Tables 1  
A study was made to determine the clinical value of some enzymatic tests in  
current use, in the course of epidemic hepatitis: the variations of the alkaline  
phosphatase level of the blood, of the pseudo-cholinesterase and of the catalase  
in the blood. Parallel studies were made of the value of total bilirubinaemia  
(direct and indirect), using the dysproteinaemia tests as functional tests of com-  
parison. It was found that determination of the decrease of the enzymatic activity  
of the couple blood catalase-cholinesterase, as found in 50% of the cases, mostly  
severe ones, assumes almost always prognostic importance. The variations of  
the alkaline phosphatase appear to constitute a test proving the mechanical nature  
of the icterus, although moderately increased values have been observed in 25%  
of the cases of epidemic hepatitis examined. (XX, 6)

Title : Succinic Dehydrogenase and Cytochrome Oxidase Activity  
in the Liver. Experimental Investigation

Orig Pub : Probl. terap., 1957, 8, 13-23

Abstract : In the liver of rabbits, which had been poisoned with P  
or  $\text{CCl}_4$ , the activity of succinic dehydrogenase (I) de-  
creased 16 - 63% and cytochrome oxidase (II) 10 - 60%  
in comparison with the standard. The relation between  
the activity of I and II (according to  $\text{O}_2$  consumption)  
diminished to 2.3 - 1.3 and even 0.68 with a norm of  
2.6. A change in the intensity of liver respiration  
was explained by the infiltration of mitochondria and  
by subsequent inactivation of respiratory enzymes, as

Title : Results of Stimulation of Metabolism in Grey Sheep.

Orig Pub: Comun. Acad. RPR, 1957, 7, No 2, 233-242.

Abstract: For purposes of stimulating metabolism, corn and oats, iodized to Zamfirescu method, were introduced into the ration of 11 pregnant grey sheep, (7.27 g of iodine daily). This caused an increase of the intensity of metabolism, an

*CP* The influence of temperature on the absorption of nutritive matter. I. Nitrogen absorption. N. Zamfiracu. *Bul. Facult. Sci. Agr. (Cluj), Coman. Lab. Fitoteh.* 1, No. 2, 3-63 (in French 64-70) (1938).—Alfalfa plants were placed in 2 sets of vessels, one filled with sand fertilized with all required mineral matter except N, the other with only N in the form of  $\text{NaNO}_3$  and  $(\text{NH}_4)_2\text{SO}_4$  in concs. of 0.012 and 0.001%, resp., maintained at a const. temp. ( $4^\circ$ ,  $10^\circ$ ,  $18^\circ$ ,  $25^\circ$ ,  $32^\circ$ ,  $39^\circ$ ,  $44^\circ$  and  $40^\circ$ ) for the entire length of the expt. Differentiation of the plants set in after 5-7 days, both in color and growth, and became increasingly pronounced. After 13-25 days the dry substance was weighed, the N content of the vegetable matter detd. and the root length measured. The absorption rate increased with rising temp. from  $4^\circ$  on to a max. ( $32^\circ$ ), beyond which it fell off. The effect of temp. is different for nitric N from what it is for ammonia N, setting in 3 days sooner with the latter and being more intense between  $18^\circ$  and  $44^\circ$ , while below  $18^\circ$  and above  $44^\circ$  nitric N is absorbed more easily than ammonia N. II. Phosphorus, potassium and calcium absorption. *Ibid.* No. 3, 3-58 (in French 60-63) (1937).—By use of the above method,  $\text{NaPO}_3$  (in a concn. of 0.0013%  $\text{P}_2\text{O}_5$ ), 0.001%  $\text{K}_2\text{O}$  and 0.001%  $\text{CaO}$  were applied to maize plants and the following conclusions reached: During the first 13-14 days K penetrates the plant with an intensity 9 times as strong, P with an intensity 8 times as strong and Ca with an intensity about twice as strong at  $32^\circ$  as at  $4^\circ$ . Between  $4^\circ$  and  $18^\circ$  and between  $39^\circ$  and  $49^\circ$  Ca absorption predominates; K follows at a considerable distance, and P comes last. Between  $18^\circ$  and  $39^\circ$  Ca and K exchange places. The plant physiol. reasons of this effect of temp. are discussed. A. H. Krappé

Title : Experimental Investigation of the Size of the Heart.  
The Influence of Electric Stimulation of the Cortex of  
Large Hemispheres on the Heart Volume and Blood Pressure.

Orig Pub : Studii si cercetari fiziolog., Acad. RPR, 1957, 2, No 1-2,  
25-33

Abstract : The influence of electric stimulation of the cortex of  
the large hemispheres in the region of the anterior sym-  
physis on the volume of the heart and blood pressure  
was investigated in dogs. In narcotised dogs, a decrease  
of systolic volume was noted at the time when the increa-  
se of pressure was insignificant, or an increase of dias-  
tolic volume at the time when the increase of pressure

Orig Pub : Fiziol. norm. si patol., 1956, 3, No 2, 212-219.

Abstract : Daniyelopolu established that the isolated heart of a frog, stopped in a condition of contracture under the influence of massive doses of strophantine (I), can restore its performance in time under the action of massive doses of acetylcholine (II) or K. In the experiments of the authors, polarization by a direct-current cathode also caused restoration of the performance of the heart.

Title : Spirographic Examinations of Individuals with Heart Ailments.

Orig Pub : Fiziol. norm. si patol, 1956, 3, No 4, 471-478

Abstract : A study was made of the respiration of 16 patients with both compensated and decompensated heart diseases. A significant reduction was seen in maximal ventilation and respiratory reserve. Vital capacity was relatively slightly decreased (in the majority of patients there were no symptoms of congestion).

Title : Evaluation of the Methods of Determination of the Speed  
of Propagation of Excitation in Different Points of the  
Epicardial Ventricles of Mammals in Situ

Orig Pub : Fiziol. norm. si patol., 1956, 3, No 5, 567-575

Abstract : The existing methods are based on the evaluation of the  
moment of origin of the inner deflection in the plain  
unipolar EKG; the author states that the moment of the  
emergence of the inner deflection does not reflect the  
moment of the excitation of the point located under the  
electrode, but corresponds to the location of the point  
in the positive zone of the corresponding integral
